

COVID vaccinations administered abroad

THE FACTS

- If you had both or one of your vaccinations in another country it will **NOT** show on the NHS App.
- We are unable to rectify this problem at GP Practice level at present. You can make us aware of the vaccinations you have had, and we can add these to your medical record, but this will not update the NHS App. We cannot do anything about this until further guidance is issued by the NHS vaccination service.
- Patients are likely to be stopped from travelling if both of their vaccinations do not show on NHS App.
- Printed medical records, except for those requested via the 119 COVID service, will not be accepted for travel. If you were vaccinated abroad and we have updated your medical records, with the detail of your vaccination, we can print proof of your vaccination, but this is not accepted as proof for foreign travel.
- Patients that have received one vaccination abroad and one in the UK will not be offered a third vaccination so they have had two in the UK. This would be against recommendation for the vaccine course.
